The Pillars Curriculum for Chemical Engineering

A bypass stream is one where a portion of the inlet to a process unit is split from the feed and instead of entering the process is combined with the outlet from that process. This practice is far less common than recycle, but may be used if your ultimate goal is a material with properties "in-between" the untreated reactant and the process outlet product.

Recycle Bypass and Purge PDF Document

Bypass Method of divert certain portion of flow without go through that particular unit Purposes: To divert flow for certain reason Reduce certain parameter such as concentration, volume or mass and etc. Bypass Refer to the diagram: Purge withdrawn(throw) out from the withdrawn(throw) system to avoid buildup in the system. If not removed, it will cause accumulation and can be harmful to the process.
